Keyboard Macro for the WEB.URL.SYNC variable. KEYCODE Macro description: Keyboard Macro for the CODE.SCR variable. R.I.P.MYSTERY - late 10/30/2012 Installation For users of Windows 7, please install the latest version of the Windows 7 Screen Saver application. For users of Windows 8, please install the latest version of the Windows 8 Screen Saver application. Known Issues Windows 8 does not currently support custom screen savers. Windows 8.1 does support custom screen savers, but they are not coded correctly for Windows 8.1. Set the destination for the screen saver using the Directory "C:\USERS\Documents\HTML\SCRENSAVER" as the first value. Use the Destination file extension of ".sa", as Windows 7 does not support ".scr" file extensions. If your computer name has spaces in the folder name, then be sure to replace them with dashes or underscores. Setting the Font Size for the WEB.URL.SYNC and CODE.SCR variables The font size for the WEB.URL.SYNC and CODE.SCR variables are important to make the code readable. There are two ways to set the font size for the WEB.URL.SYNC and CODE.SCR variables. The first way is to set them in the Screen Saver Settings Panel. The second way is to use the Startup Applications interface. Startup Applications The Startup Applications interface is located in the Control Panel. Start the Startup Applications Manager, and then click on Add to add a new Startup program. To open the Screen Saver Settings Panel, navigate to the Start menu, and then click on the All Programs icon, and then on the folder "HTML". Screen Saver Settings Panel Here you can select which screensaver settings to display for your screen saver. Select the Screen Saver Variable to display. You can toggle the Screen Saver Display switch to make sure you see the screen saver. Go to the WEB.URL.SYNC Variable tab, and then you can type in the value. In the CODE.SCR Variable tab, you can type in the value. Save the changes, and then exit.
