The Maxiboot installer creates the 'install.log' file in the
temporary directory. This file is created when the windows
installer starts and can be opened in WinZip. In this case, it

appears to be opening the file in a graphical viewer. When
Maxiboot is running the file will be in '\e\ex

2. Save the file as "Installer Setup V15.zip" and put it on your PC. Open this file with a zip archiver. Go to the folder you downloaded the file into. Double-click "Installer Setup V15.zip" to install the software. 4. Click "Next" to continue the installation process. 6. Select "Add installation repository". 7. Go to "List the Source of Downloaded Files" and enter the below values. Press "Enter". 8. Select "Update Now". 9. Wait for the update to finish. You can now continue the installation process. Excerpt from site: Maxiboot V15 Here is the video tutorial Step by Step Guide to use maxiboot V15.8 This invention relates generally to rotary actuators and more particularly to rotary actuators of the type used in conjunction with conventional keyswitch assemblies. Key switching assemblies have been developed which are generally quite satisfactory in operation but are somewhat expensive. A number of rotary actuators have been developed in an attempt to reduce the cost of these devices. The following U.S. patents disclose various arrangements for providing rotary control actuation of electronic circuitry. U.S. Pat. No. 3,842,049 discloses a rotary actuator having a key member adapted to be inserted into a key housing which includes a base, a slide member and a dial rotatably mounted on the base and coupled to the slide member. The dial has a series of indicia thereon representing the numerals 1 through 9. The slide member is attached to the base through an intervening arm member which is also attached to the base and rotates with the dial. When the key is rotated the slide member is moved to a position adjacent the base causing the dial to rotate thereby changing the indicia thereon. Another patent of interest is U.S. Pat. No. 3,881,395 disclosing a rotary actuator having a key member including a spring coil operative in conjunction with a pair of coil springs mounted in spaced apart relation and in a substantially parallel relationship relative to one another. The springs are rotatably mounted on a first shaft and are attached at their respective ends to a second shaft which is rotatably mounted in a key housing. A pull shaft is also rot 2d92ce491b
