Field of the Invention The invention is related to integrated circuits and, in particular, to integrated circuits for RF transceivers and wireless telecommunications. 2. Description of the Related Art Communication between computer systems has become increasingly prevalent in today's society. One way of communicating between computer systems is by transmitting digital data across a "wire" or "wireless" media. For example, digital data, in the form of binary bits, can be communicated across a wire using a series of high and low voltage levels. Other forms of digital data include frequency modulation or amplitude modulation. Other media in which digital data can be communicated includes infrared, acoustic and RF. There are different types of RF media. For example, RF media includes frequency modulated (FM), amplitude modulated ( 2d92ce491b
