Quote of the week Think of a smile as a mirror of a soul and a photograph as a mirror of a life. Hello my name is Vishal kumar raju and i am a research scholar. I like to talk to people who have been out there and have done a lot of work in their field.Q: Spring Boot: post-construct initialization without waiting for the server to start up I have a Spring Boot

application that uses a Quartz scheduler (via the QuartzSchedulerFactoryBean). We want to start a quartz job at application startup, but it needs to be started asynchronously to avoid blocking Spring Boot startup until the scheduler is fully initialized. I tried adding the following to my Application class: public static void main(String[] args) { SpringApplication.run(MyApplication.class, args); ScheduledExecutorService scheduler = new ScheduledThreadPoolExecutor(1); SchedulerFactoryBean factory = new SchedulerFactoryBean(); factory.setQuartzProperties(); factory.setScheduler(scheduler); factory.afterPropertiesSet(); scheduler.execute(new Job("my-scheduled-job")); } but the problem is that the scheduler is initialized but only asynchronously (i.e., the scheduler's main thread does not start until after Spring Boot has started). If I try to run this app as a "regular" Java application, I get this exception: Exception in thread "main" org.springframework.beans.factory.BeanCreationException:

Error creating bean with name 'scheduler' defined in class path resource [org/springframework/scheduling/quartz/SchedulerFactoryBean.class]: Invocation of init method failed; nested exception is java.lang.IllegalArgumentException: Failed to create scheduler with [org.quartz.impl.StdSchedulerFactory@5aba0c5] How can I initialize the scheduler asynchronously, but in a way that allows it to be used in place of the default scheduler in Spring Boot?
