AutoCAD is the software application used by architects and engineers, graphic artists, filmmakers, hobbyists and others. AutoCAD is a computer-aided design (CAD) and drafting software application. Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. How is AutoCAD used? AutoCAD is widely used for drafting on the desktop or from a tablet. It is also used on smaller mobile devices like smartphones and iPads. Some of the major applications include -Architectural Design: AutoCAD is used for architectural design to create 2D & 3D drawings. -Vehicle Design: AutoCAD is used to design and create a vehicle with several features like mockups, floorplans, etc. -3D Game Development: AutoCAD is widely used to develop games and 3D models. -Visual Effects: AutoCAD is used to create visual effects like special effects in film making. -Presentation & Web Content Creation: AutoCAD is used to create presentations, web content, etc. -Other: There are many other areas where AutoCAD is used for diverse applications. What is AutoCAD used for? AutoCAD is used for the following applications: 1. Architecture 2. Engineering 3. Fine Arts 4. Presentation 5. Web Content 6. Construction & Design 7. Graphics 8. Automotive Design 9. Animation 10. Manufacturing 11. Entertainment 12. Various What are the basic concepts of AutoCAD? The following are some of the basic concepts of AutoCAD which you must know before using AutoCAD. 1. The objects used in the drafting environment are called entities. They are visually represented as geometrical entities, such as line, arc, arc segment, ellipse, circle, spline, text, and so on. They are also represented as constraints and dimensions. The draftable entities include the line, arc, arc segment

## What's New in the AutoCAD?

Quickly mark up 2D or 3D drawings to give feedback on a variety of drawing tasks. Learn how to add line annotations, pinpoints, and a variety of visual messages in a design such as the dimensions, constraints, or precision. (video: 1:30 min.) Creating parametric models: You can quickly and easily import parametric models from solidworks, stereolithography files, or other Solidworks files (such as autoCAD layout) and automatically generate new parametric dimensions in your drawings. (video: 1:42 min.) Laying out any new design: Quickly draw a 2D or 3D view by simply selecting the angle of the layout. We added an interface that will automatically place views so you can get an overview of your design. (video: 1:40 min.) Lay out and generate an elevation and section view of your work. You can use the elevation or section view to see the overall placement of your parts. (video: 1:40 min.) Generate a 3D model from your 2D design: Go from 2D to 3D with the click of a button. We added new layout features that will generate a 3D model of your 2D drawing. (video: 1:42 min.) You can also turn the 2D drawing into a 3D model. (video: 1:42 min.) Automatically add lengths and angles in 2D and 3D drawings: We added an option to automatically add lengths and angles to your 3D drawing. (video: 1:22 min.) Fast, accurate draftsmanship: Improve draftsmanship by efficiently eliminating mistakes. We added a feature that allows you to replace the lines and arc to an existing line and arc. (video: 1:31 min.) Select multiple arcs and create a 3D polyline that you can modify at will. (video: 1:41 min.) Consolidating materials: Consolidate drawing features into a single material. Consolidating features saves time and money. (video: 1:23 min.) Simplify your drawings with the help of new features. We added a feature that will automatically remove excess material in your drawings. (video: 1:23 min.) Increase the speed of your 2D and 3D designs. We added a new feature that will merge two lines into a single line and automatically align
