"The most complete, advanced and easiest to use modem software package for Windows" All the world's major brands are represented by the operating systems and hardware modems listed above. Most of these brands of modems come with a complimentary software program, called the modem driver. This driver is pre-installed onto the device. It is the one program that is necessary to be able to communicate with the modem. With the exception of the latest generation of modems such as the MZR8881, MZR8004, MZR8044 and the MZR8111, most manufacturers of modems have discontinued the sale of their own modem drivers to the public. (Note: MZR stands for 'Market Zero Recovery'). The vast majority of users of modems are now left with the job of discovering which drivers they need to download from the manufacturer's website to enable them to use their modem. Some users of modems have even resorted to downloading and using drivers for modems made by manufacturers that are no longer in business. Not only is this a great risk, but most manufacturers offer only limited support for their drivers. This is because modem drivers are usually proprietary code that is not openly available to the general public. The manufacturer of the modem knows how to correctly program their code, therefore when they do provide their drivers, it is a genuine driver they have written and tested on their own computer and not a driver for a third party product. The method you use to
